

Ventilation

Reduce the spread of COVID-19—bring fresh air into your room

This room has... **evaporative cooling**

- ✓ It cools the room
- ✓ It brings in fresh air

What you can do

- ✓ **Leave a window open** so air can go out
- ✓ When the cooling is turned off, you may still feel fresh air from the ceiling vent.
This comes from a central fan
- ✗ Don't block the ceiling vents
- ! If you have COVID-19, shut your bedroom door
