

# Ventilation

Reduce the spread of COVID-19—bring fresh air into your room

This room has... **a centralised Heating, Ventilation and Air-conditioning (HVAC) system**

- ✓ It makes the temperature comfortable
- ✓ It brings in a mix of fresh and filtered air

## What you can do

- ✓ It's OK to **open windows and doors...** but check with the staff first because this might change the temperature or change the way the air flows.
- ! But if you have COVID-19, shut your bedroom door
- ✗ Don't block the vents in the ceiling or walls. These vents circulate air.
