

# Ventilation

## Reduce the spread of COVID-19

This room has... **a fan**

- ✓ It makes the air move
- ✗ but it doesn't bring in any fresh air.

## What you can do

### Kitchen and bathroom fans

- ✓ Leave them on (if they are not too noisy)

### Portable pedestal fan

- ✓ the fan may be in front of an open window, facing out.  
This helps blow old air out of the room.
- ✗ the fan should **not** blow directly at a person.  
This might blow COVID-19 particles onto them.

### Ceiling fan

- ✓ turn the fan on low. Open the windows if you can.
- ! If a person has COVID-19, turn the ceiling fan **off**.
